appLOAD™ suite

*“**appLOAD** tool helped us tremendously in reducing our project time lines for converting large amounts of data from various legacy systems into **Oracle**. We were able to achieve the data conversion with very limited technical resources. Especially support team is very responsive. We got every penny of our investment from this tool.”*

Hypercom

Hypercom elected to use **appLOAD** to assist in a complex, multi-country, multi-language, Oracle EBS 11i rollout. The countries involved Sweden, Germany, France, the UK, Spain and the United States. With the **appLOAD** tool's help, a high volume of multilingual data was loaded into the system with complex pre-validations achieved.

Global payment technology leader **Hypercom Corporation** delivers a full suite of high security, end-to-end electronic payment products and services. The Company's solutions address the high security electronic transaction needs of banks and other financial institutions, processors, large scale retailers, smaller merchants, quick service restaurants, and users in the transportation, petroleum, healthcare, prepaid, unattended and many other markets. Hypercom is a founding member of the Secure POS Vendor Alliance (SPVA) and is the second largest provider of electronic payment solutions and services in Western Europe and third largest provider globally.

Modules Implemented

Delivering the appLOAD suite with the conversion of:

- AP Invoices
- AP Payments
- Vendors, Sites and Contacts
- Customers, Sites and Contacts
- AR Invoices
- AR Receipts
- Sales Orders and Lines
- Purchase Orders
- On Hand Quantities with Serial Numbers
- Standard Item Cost
- Service Contracts
- Employees
- BOMs
- Approved Supplier List
- MRP Forecast
- Installed Base

Solution/Benefits

- Successful implementation of appLOAD.
- Still continues to use appLOAD for ongoing data maintenance for activities such as price updates, item updates, volume data entry, etc.
- Was able to convert and consolidate data of numerous languages for many different countries
- Implementation time for a 600GB Database took about 22 minutes.
